Supply Chain Implementation Consultant | Industry Solutions | AI-enabled Business Process Delivery

PROFESSIONAL SUMMARY

Transportation and logistics professional with a master's degree in Transportation Engineering and a background in transportation system optimization, public-sector project coordination, business process analysis, and AI application delivery. Experienced in breaking down complex business scenarios into objectives, workflows, data, rules, and acceptance criteria; designing digital or AI-enabled solutions; building verifiable prototypes; and coordinating delivery across business and technical stakeholders. Recent hands-on work covers RAG, AI agents, workflow automation, information structuring, and auditable quality validation. Well suited to supply chain planning, logistics technology, traditional-industry digital transformation, and customer implementation roles.

CORE COMPETENCIES

- **Business and solution analysis:** Translate complex business problems into structured requirements, process maps, data inputs, business rules, solution options, and acceptance criteria.
- **Implementation and delivery:** Support solution design, prototype validation, testing, documentation, user acceptance, rollout coordination, and continuous improvement.
- **Supply chain and transportation foundation:** Master's research in transportation system optimization and analysis; bachelor's degree in Logistics Engineering; familiar with analytical modeling and operational trade-offs in complex scenarios.
- **AI-enabled process improvement:** Build practical prototypes with Python, APIs, RAG, agents, and workflows for knowledge retrieval, information extraction, and process automation.
- **Stakeholder coordination:** Connect business, product, technical, and public-sector stakeholders; organize milestones, formal deliverables, training materials, and on-site execution.

SELECTED PROJECTS

Auditable Enterprise Knowledge Q&A System

Apr 2026 - Present | Business Scenario Design and Acceptance

- Designed a structured knowledge workflow for organizations with fragmented policies, SOPs, project documents, and research materials, covering content intake, retrieval, answer generation, evidence tracing, and knowledge publication.
- Built the retrieval and answer pipeline with Python, RAG, and BM25-style keyword search. Used source indexes, evidence binding, and an "insufficient evidence, no answer" rule to control answer quality and operational risk.
- Established layered evaluation for retrieval quality, answer quality, answerability, and source onboarding; completed end-to-end validation from external-source screening and review to formal ingestion.

Job and Resume Delivery System

Apr 2026 - Present | Requirements and Solution Lead

- Mapped the workflow for fragmented job inputs, inconsistent fields, difficult-to-audit matching decisions, manual confirmation, resume customization, and delivery records.
- Integrated job discovery, job-description structuring, matching analysis, resume customization, and PDF acceptance into a traceable workflow with job-level content, status, and version isolation.
- Defined quality checks for identity information, links, page count, text completeness, PDF metadata, and visual output; introduced batch processing, failure isolation, and human review gates.

AI-assisted B2B Lead Generation System

Apr 2026 - Present | Project Lead

- Designed an AI-assisted workflow for market research, buyer screening, personalized outreach, and follow-up tracking, connecting prioritization, human confirmation, and result write-back into one operating loop.
- Built and classified a cross-market buyer pool of 330 records, including 230 A-level prospects; narrowed the UK market to 52 high-priority buyers and completed initial outreach and follow-up for 15 targets.
- Prioritized prospects using buyer quality, partnership potential, contactability, and quotation readiness, while retaining human confirmation and outreach records to support process control and auditability.

PROFESSIONAL EXPERIENCE

Nanhai Navigation Aids Support Center, Haikou Lighthouse Office | General Affairs Specialist

Jul 2024 - Apr 2026

- Collected requirements, coordinated stakeholders, prepared formal materials, and managed on-site execution across internal functions in a public-sector organization.
- Independently coordinated 20-30-person employee events from requirements confirmation and solution planning through logistics, on-site coordination, and post-event review; delivered all activities on schedule.
- Consolidated fragmented historical, technical, public-education, and communications materials into formal application packages for a heritage lighthouse nomination and a maritime science education base; also supported the delivery of an international lighthouse award event.

Beijing Qingkong Zhiyun Intellectual Property Agency | Patent Agency Intern

Oct 2019 - Jun 2020

- Communicated with enterprise clients and inventors to understand technical details, identify core problems and implementation paths, and convert non-standard technical inputs into structured, reviewable patent application materials.

EDUCATION AND RESEARCH

University of Shanghai for Science and Technology | M.S. in Transportation Engineering

Sep 2020 - Jun 2023 | *Transportation System Optimization and Analysis* | Published two first-author academic papers.

Dalian University | B.S. in Logistics Engineering

Sep 2015 - Jul 2019

TOOLS AND METHODS

- **Analysis and delivery:** Requirements analysis, process mapping, solution design, prototype validation, SOP development, stakeholder coordination, user acceptance, quality assurance, and project review.
- **AI and data:** Python, large language model applications, prompt engineering, AI agents, workflows, RAG, BM25 / IDF retrieval, evaluation, and human-in-the-loop design.
- **Integration and collaboration:** REST APIs, JSON Schema, Git, GitHub Actions, automated testing, n8n, Notion API, Gmail API, Feishu, Google Sheets, and Obsidian.
- **Languages:** Chinese (native), English (CET-6).
